

Macintosh OS X 10.3 Setup for InterMail

Perform the following steps to configure Mac OS's Mail client:

1. Open **Mail**.
2. From the **Mail** menu, select **Preferences**.
3. Click the **Accounts** icon.
4. Enter your full email address in the **Description** field.
5. Enter your full email address in the **Email Address** field (for example, *user@example.com*).
6. Enter your name in the **Full Name** field.
7. Specify *pop.registeredsite.com* as your Incoming Mail Server.
8. Enter your full email address in the **User Name** field (for example, *user@example.com*).
9. Enter your password in the **Password** field
10. Select the arrow box on the **Outgoing Mail Server (SMTP)** option and select **Add Server**.
11. In the **Outgoing Mail Server** field, enter *smtp.registeredsite.com*.
12. Click **OK**.
13. Close the **Accounts** window.
14. Click **Save**.
